

About Our Service

Wildfire Detection AI that Never Sleeps

FireScout Fact Sheet

Mission and Values

FireScout provides 24/7/365 Wildfire Detection That Never Sleeps. It can detect wildfires in minutes, integrates seamlessly into existing alert systems, offers a very low cost of deployment and the highest accuracy available.

Partnership & Customer

-  **Infrastructure**
Johnson Controls, ALERT Wildfire
-  **Utilities**
PG&E, SDG&E, NV Energy
-  **Government**
Sonoma County, REDCOM

Key Metrics

-  **309**
Cameras Monitored
-  **1000+**
Cameras Available
-  **94,000 mi²**
Area Covered
-  **Up to 15 miles**
Early Detection Distance
-  **99%**
Accuracy
-  **24/7**
Detection

Key Features

- > Event Information
- > Recent Log
- > Playback
- > History Log
- > Fire Direction
- > Night Detection
- > Select Event Type
- > Timeout

Key Personnel

-  **Bow Rodgers**
President & Co-founder
-  **Robert Grey**
Sales Manager & Co-founder
-  **Yoon Jin Choi**
Product Owner
-  **MinKook Cho**
Director of R&D

Problem Definition

Wildfire Problem

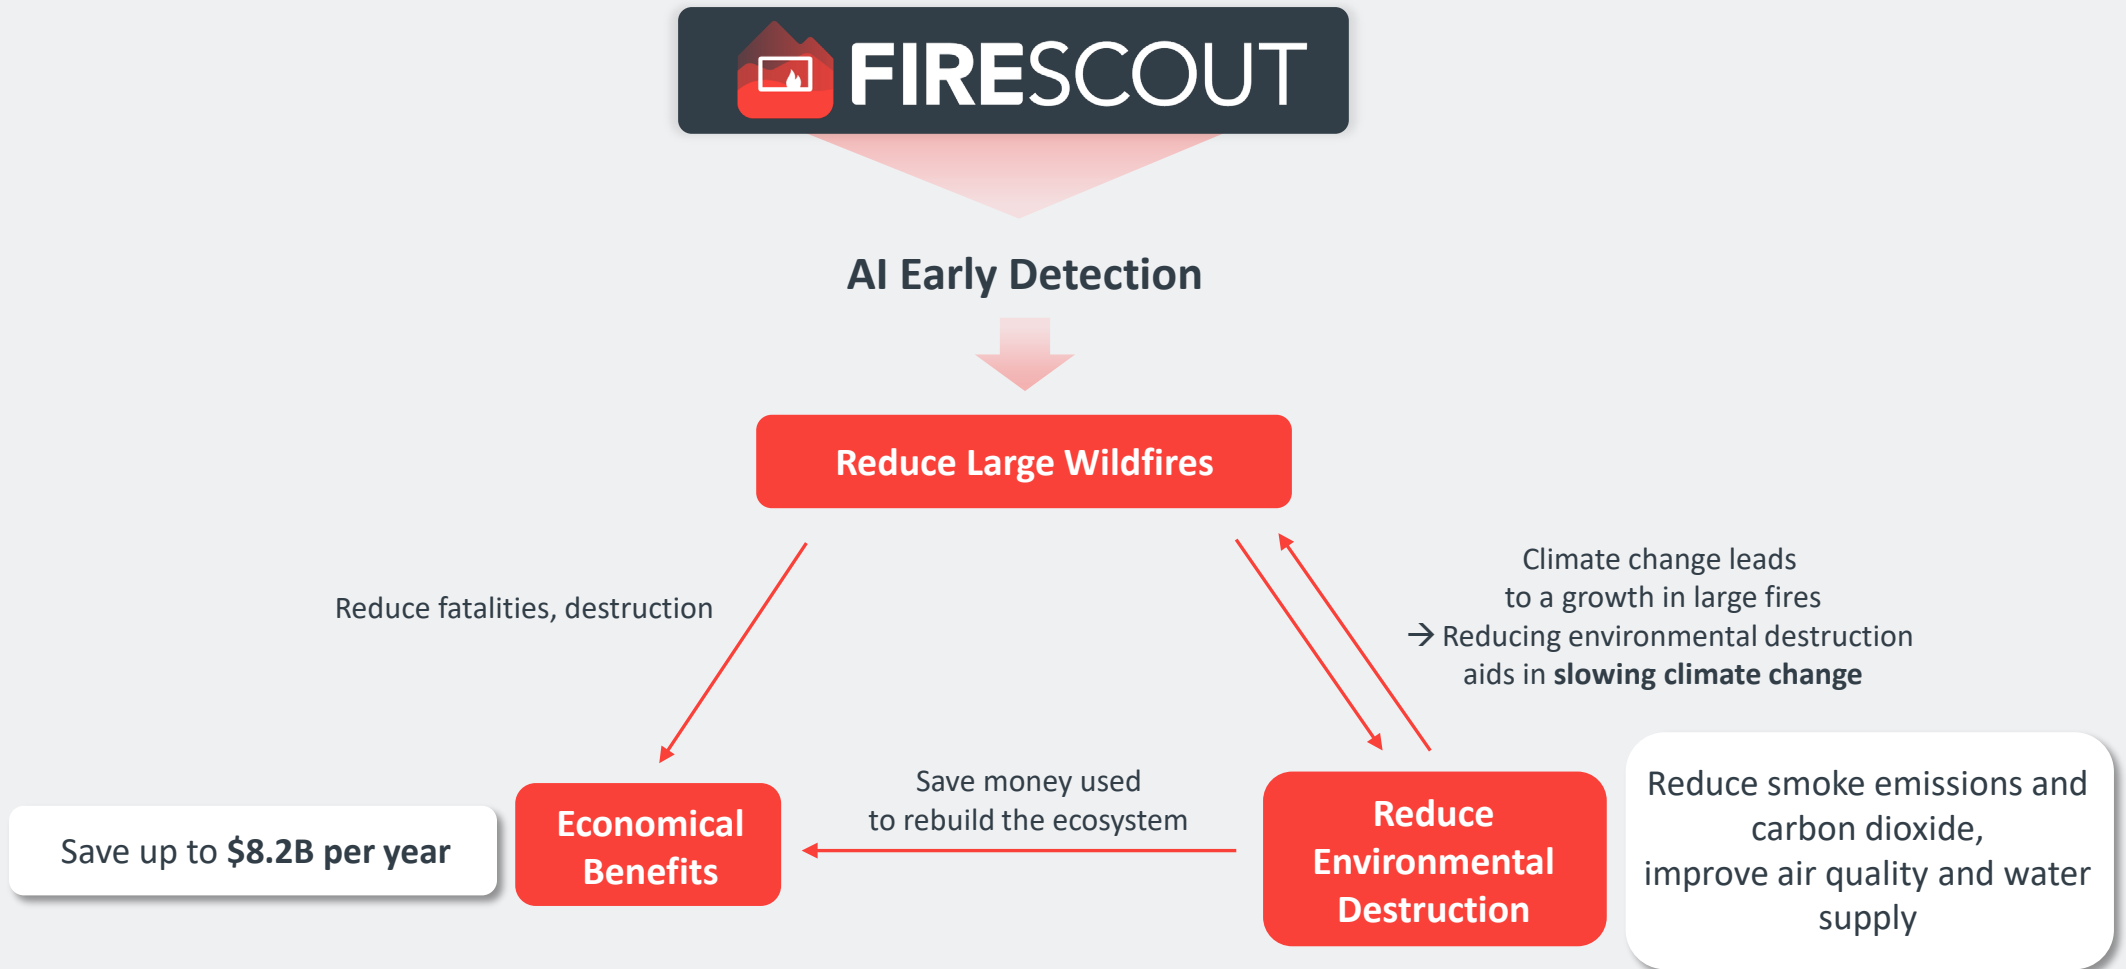

- **2K+ fires ignited** by California's 3 largest utilities (2014-2017)
- **\$11.4B of economical California damages** in average (2016-2020)
- Destructive wildfires pose threats to **water supply, air quality** and other environmental factors

Market Problem

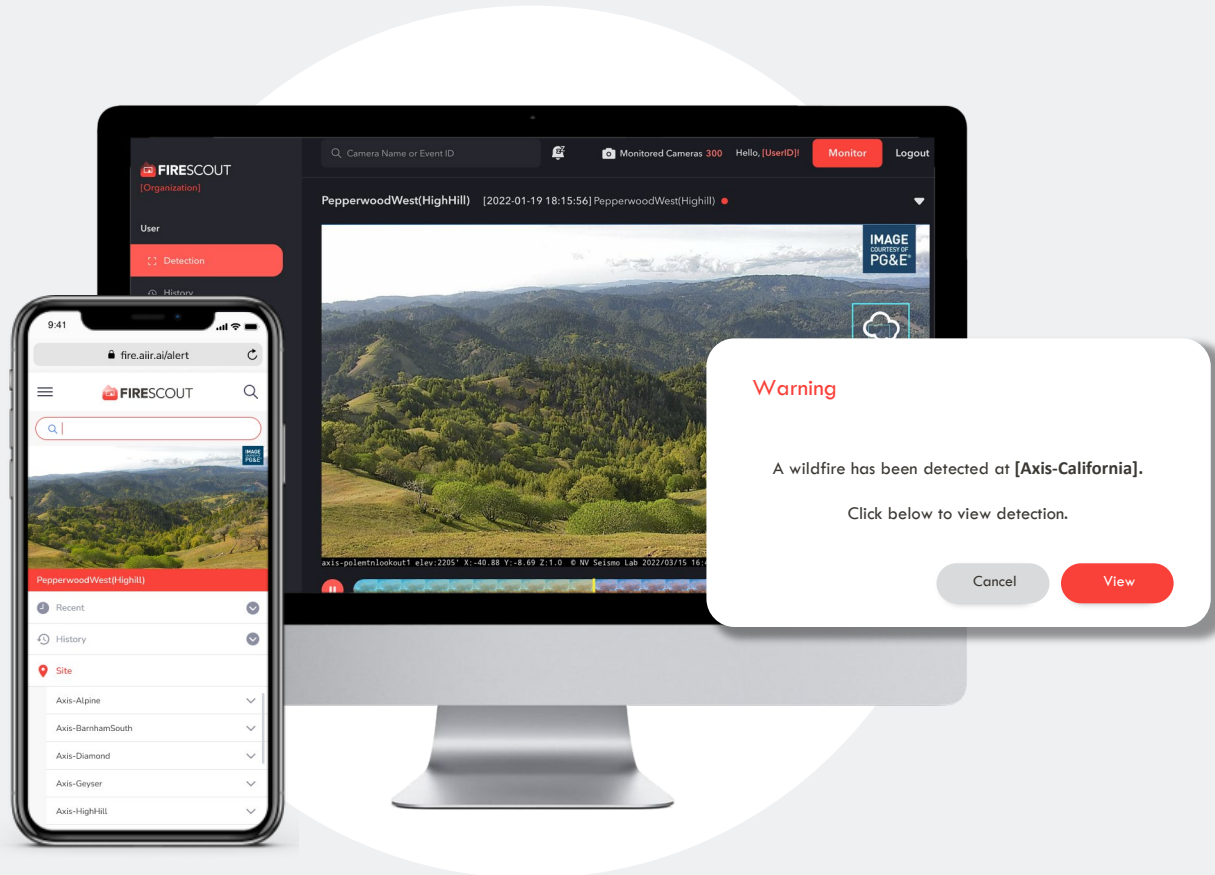

- **New installation** of HW is needed
- The detection time is **not fast enough**
- The services are **not user friendly**
- **No use of AI**, or show **low performance**

Solution Impact

FireScout AI-based Early Wildfire Detection

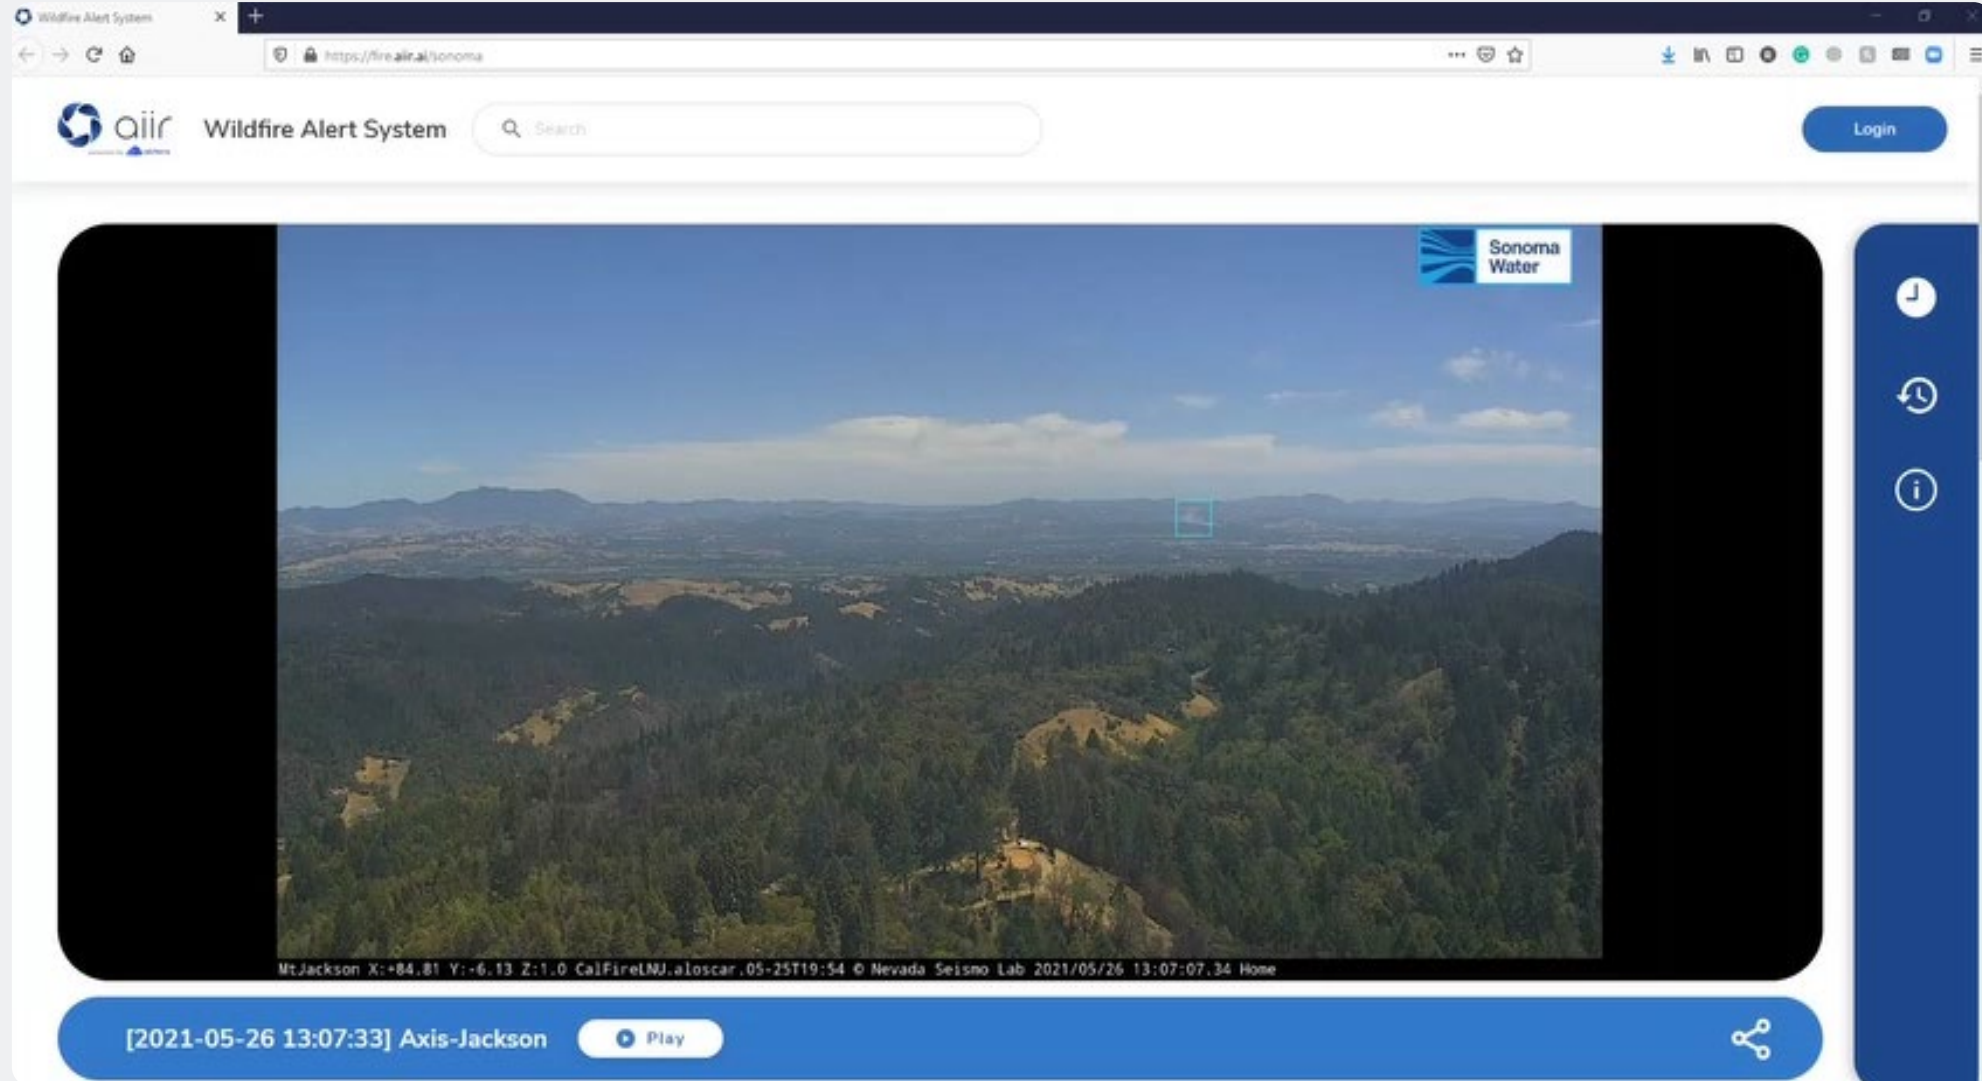

Early-stage smoke and fire detection from connected FHD cameras.

The primary objectives of FireScout's algorithm are to:

- Detect smoke or fire as soon as visible within the camera frame
- Detect smoke and fire before CCTV operators or the general public report the fire
- Alert a human capable of directing emergency response

Actual product performance footage. Clips taken directly from product dashboard. Currently monitoring 309 cameras 24/7.
New version to be updated on May 2nd.

Wildfire Alert System Overview

A simple 4-step process provides wildfire detection in under 1 minute.

Firespotting Cameras

Send image data to the cloud
Provided by ALERT Wildfire

AI in the Cloud

Deep-learning algorithms **detects smoke**, sends wildfire alerts for confirmation

Human-in-the-Loop

1 person per 150 cameras filters AI results for false alarms, **confirms alerts**

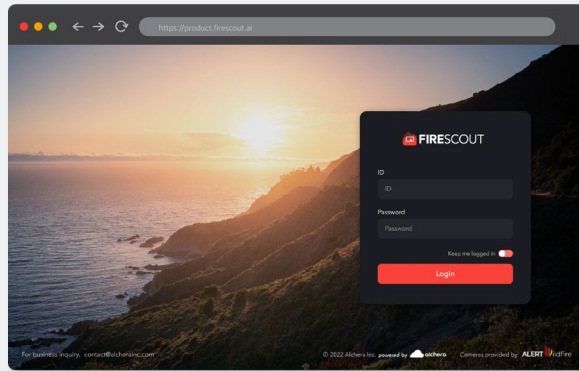

Immediate Alert

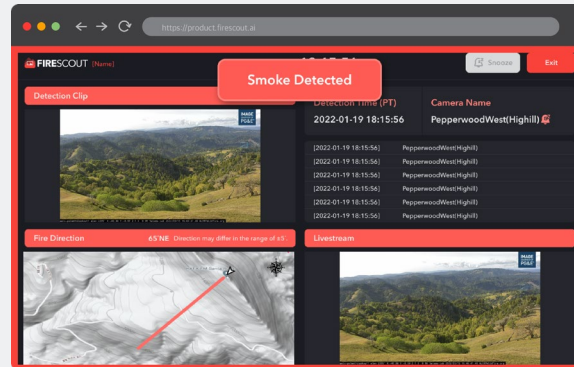

Human-confirmed fires populate on dashboard, triggers an **alert to users** by SMS, e-mail

User Experience

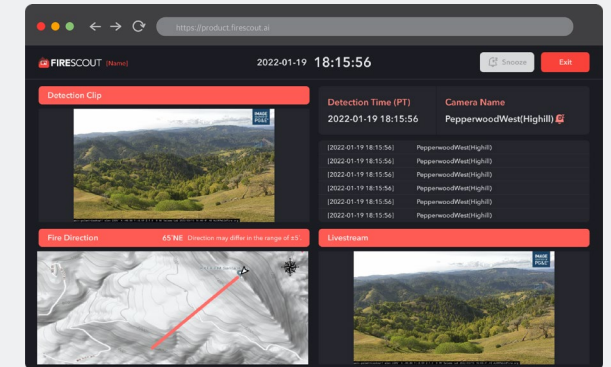

Real-time Monitoring

01 Log-in

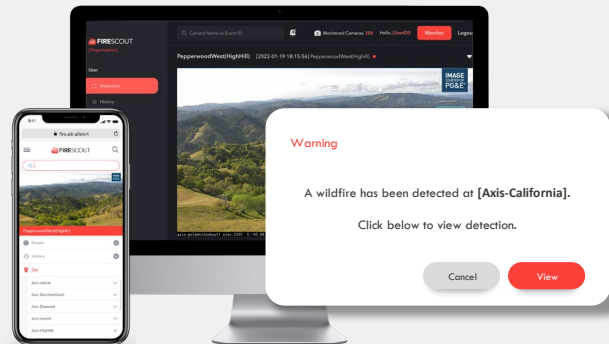

02 Receive Alerts

03 Review Alerts

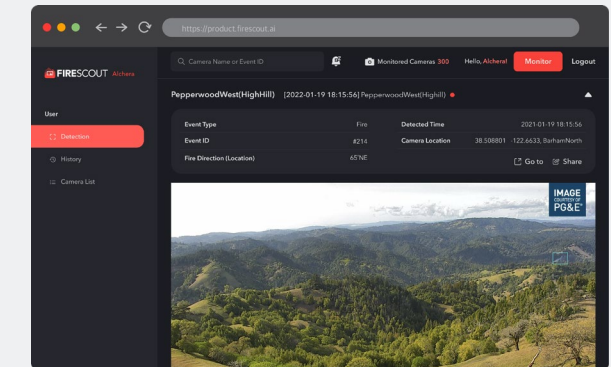

Real-time Alerting

01 Receive SMS/Email Alerts

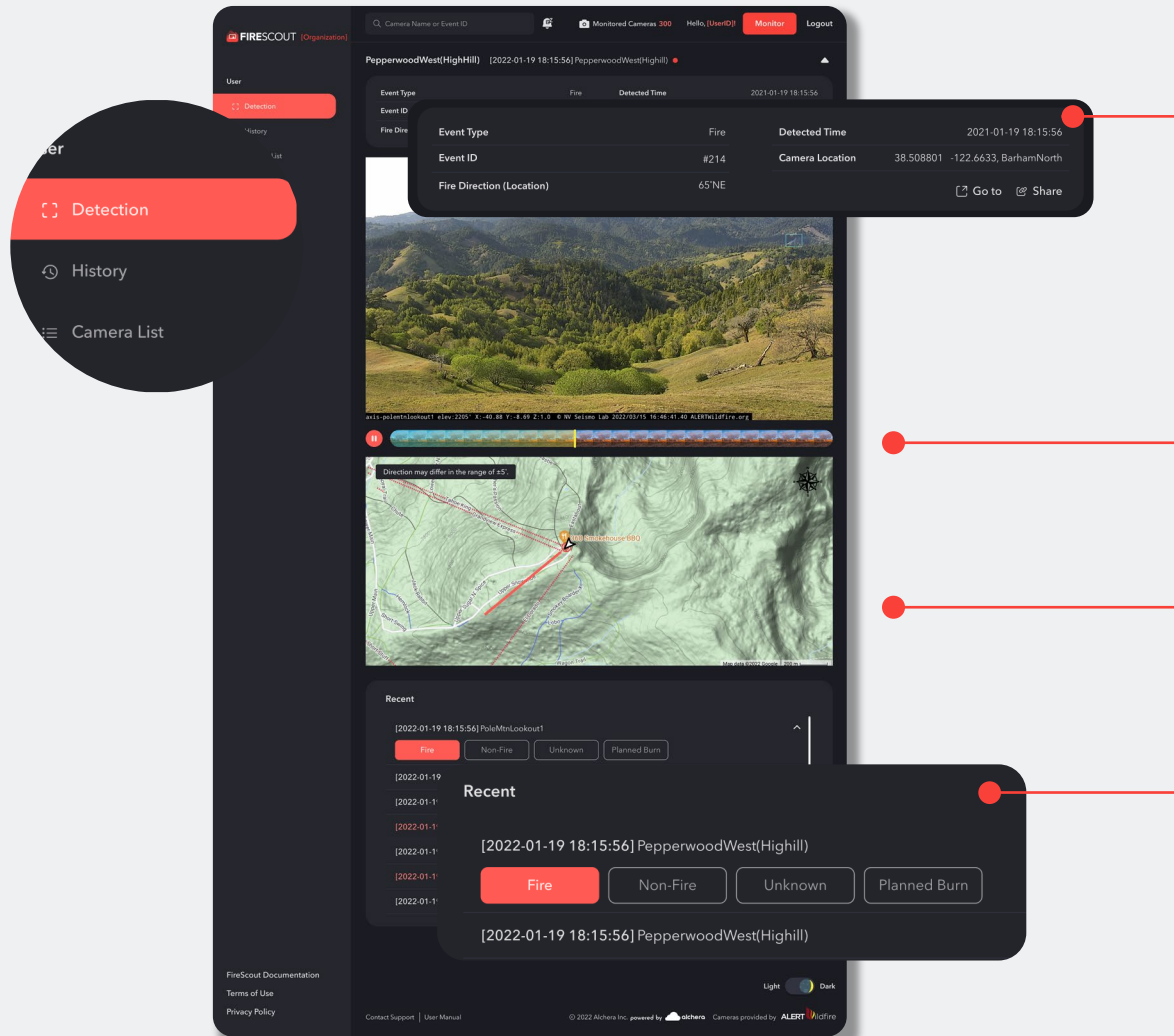

02 Click Alarm Link

03 Review & Take Action

Product Features

Event Information

provides detailed information about the event

Weather Information

provides real-time weather information for the camera region

Playback

shows the previous and following 4 minutes of video before/after the smoke was detected

Fire Direction

provides map view and directional information

Recent Log

shows all detections from all cameras from the past 72 hours

Select Event Type

records detection event type for continual learning

Night Detection

detects smoke via IR image at night, allowing 24-hour coverage

History Log

shows all detections categorized by camera site

Monitor Mode

adds visual and audio effects when a new detection arrives

Timeout

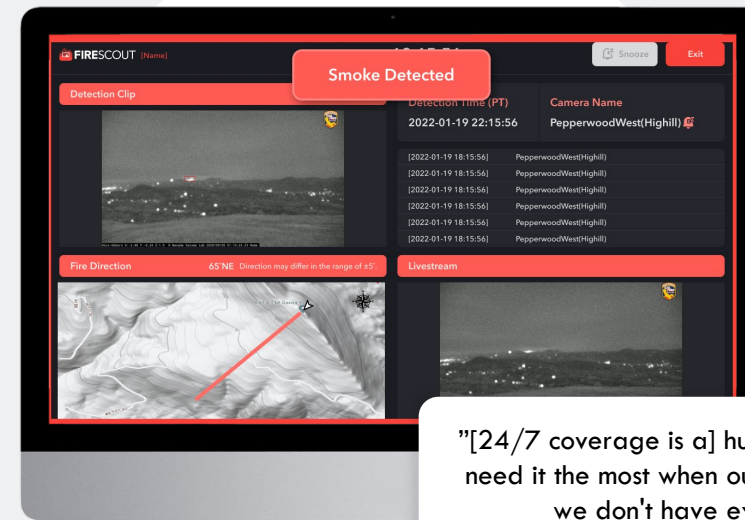

allows user to pause alerts(not detections) for a given camera

More Coming Soon

location estimation of GPS-coordinate of fire

Product Features: Night Detection

Night detection AI has been deployed as a beta version over 309 cameras since November 2021 with multiple events verified by users. This feature completes the **wildfire detection that never sleeps**.

"[24/7 coverage is a] huge benefit, that's when we need it the most when our populace is asleep, and we don't have eyes out in the hills."

- KT McNulty, Executive Director of REDCOM Dispatch

FOREST FIBRE

forico
future fibre

"Alchera's FireScout gives us a **really critical early jump** to get our eyes on a fire."

- Eric Sutphin, PG&E Hazard Awareness & Warning Center

"FireScout was the only provider in our RFP process that met all our specific needs."

- Sam Wallis, Sonoma County

Partnership: ALERT Wildfire

Our close partnership with ALERT Wildfire enables FireScout to be the market leader.

With PTZ cameras and microwave networks, ALERT Wildfire provides real-time fire monitoring across a growing network of **1000+ cameras**.

As an official partner, FireScout can expand and integrate seamlessly with the camera network.

Cameras

AXIS Q6055-E PTZ Network Camera

Success Case: PG&E

On August 4th 2021, FireScout detected the start of the devastating River Fire from Howell Mtn camera within **1 minute** of visible ignition.

“Alchera's AI got a positive hit **within a minute or so** of the fire start. Another minute later it's called in and put on IRWIN, and it took **another 8 minutes** to move the camera... positive news across the board, except it's a really bad fire.”

- Graham Kent, ALERT Wildfire
